

# PRE-INSTALLATION

**NEVER BE KEPT IN THE DARK AGAIN!**

## Cost Savings

- ✓ data transfer
- ✓ fast and simple
- ✓ provided adhesive
- ✓ mobile cellular connection
- ✓ time-saving measurement

The hmbox is a digital measuring instrument that measures the humidity of different building materials such as substrates and interior environments. By attaching to the subfloor, the humidity can be measured in a user-friendly way. Data is collected and transmitted via cellular connection to a central server that can be viewed on any internet connected device.

## Application

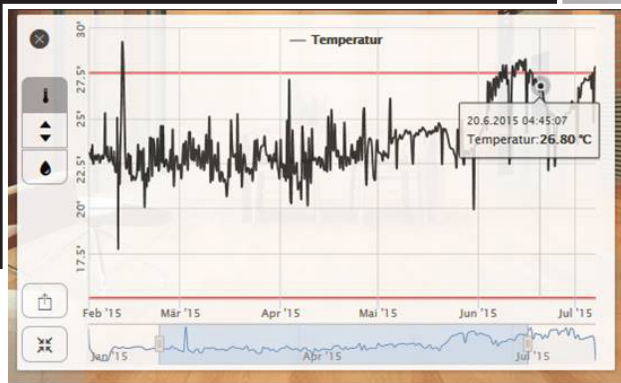

- all subfloor materials ✓
- handy and clean ✓
- user-friendly ✓
- data diverse ✓
- secure data ✓

## Data Quality

- central storage ✓
- digitally transmitted ✓
- location does not matter ✓
- monitor with app or software ✓

The results are available in a PDF format with possible access for several parties.

The measurement protocol meets audit requirements and is presented in graphical and tabular form.

## Measuring Method

- ✓ no destruction required
- ✓ independent testing
- ✓ exact procedure
- ✓ history of data
- ✓ reproducible data

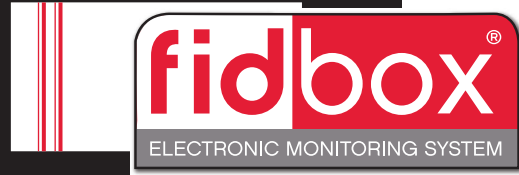

NEVER STOP MONITORING YOUR FLOORS

## POST-INSTALLATION

### NEVER BE KEPT IN THE DARK AGAIN!

Monitor temperature and relative humidity as well as a data log for historical readings all concealed just below the hardwood surface.
